

Keep Metrics — Monthly Dentrix Report Checklist

Run these four reports in Dentrix at month-end, then enter the numbers into Keep Metrics under **Entry / Upload**. Takes about 10 minutes once you know where each number goes.

1. Provider A/R Totals

Run for the full month just closed (e.g. 07/01–07/31). Use the TOTAL row for practice-wide production/collections, and the Prev. Month / YTD rows on the same report for the comparison columns. Use each provider's own row for their individual numbers.

→ Feeds: *Practice Performance (Gross Production, Adjustments, Net Collections, Prior Period, YTD) and the Providers table (one row per dentist/hygienist).*

2. Aging Report (Patient/Guarantor)

Run with no date filter, as of today. Use the TOTALS row at the bottom of the report.

→ Feeds: *Patient/Guarantor Aging — Current, 31–60, 61–90, Over 90, Est. Insurance Owed, Guarantor Portion.*

3. Dental Insurance Claim Aging Report

Run the “all claims” version (no minimum-age filter, so Current is included). Use the PRIMARY CLAIM TOTALS and SECONDARY CLAIM TOTALS rows at the bottom.

→ Feeds: *Insurance Claims Aging — Primary and Secondary, each broken into Current / 31–60 / 61–90 / Over 90.*

4. New Patients & Add-On Production

Pull the new-patient count for the month from Dentrix's New Patient report or practice dashboard. If add-on services (Ortho, Whitening, Implants, etc.) are tracked as separate procedure codes, pull production per category for the month.

→ Feeds: *New Patients count and the Add-On Services rows.*

This list is just the four Dentrix reports above. Tardiness and days-off come separately, straight from the doctor — not part of what staff need to run here.

Provider rows can also be uploaded as a CSV instead of typed in one at a time — see Entry / Upload. Goals (the targets shown on the team screen) are set once under Settings and don't need to be re-entered every month.
